

FLIGHT SIM PM

QUALITY FOR EVERY BUDGET 

777 Landing Gear Module

First step is to make sure the hardware functions are working

check the **FlightSimPM hardware** user manual

This module is compatible with FSX,P3D,X-plane

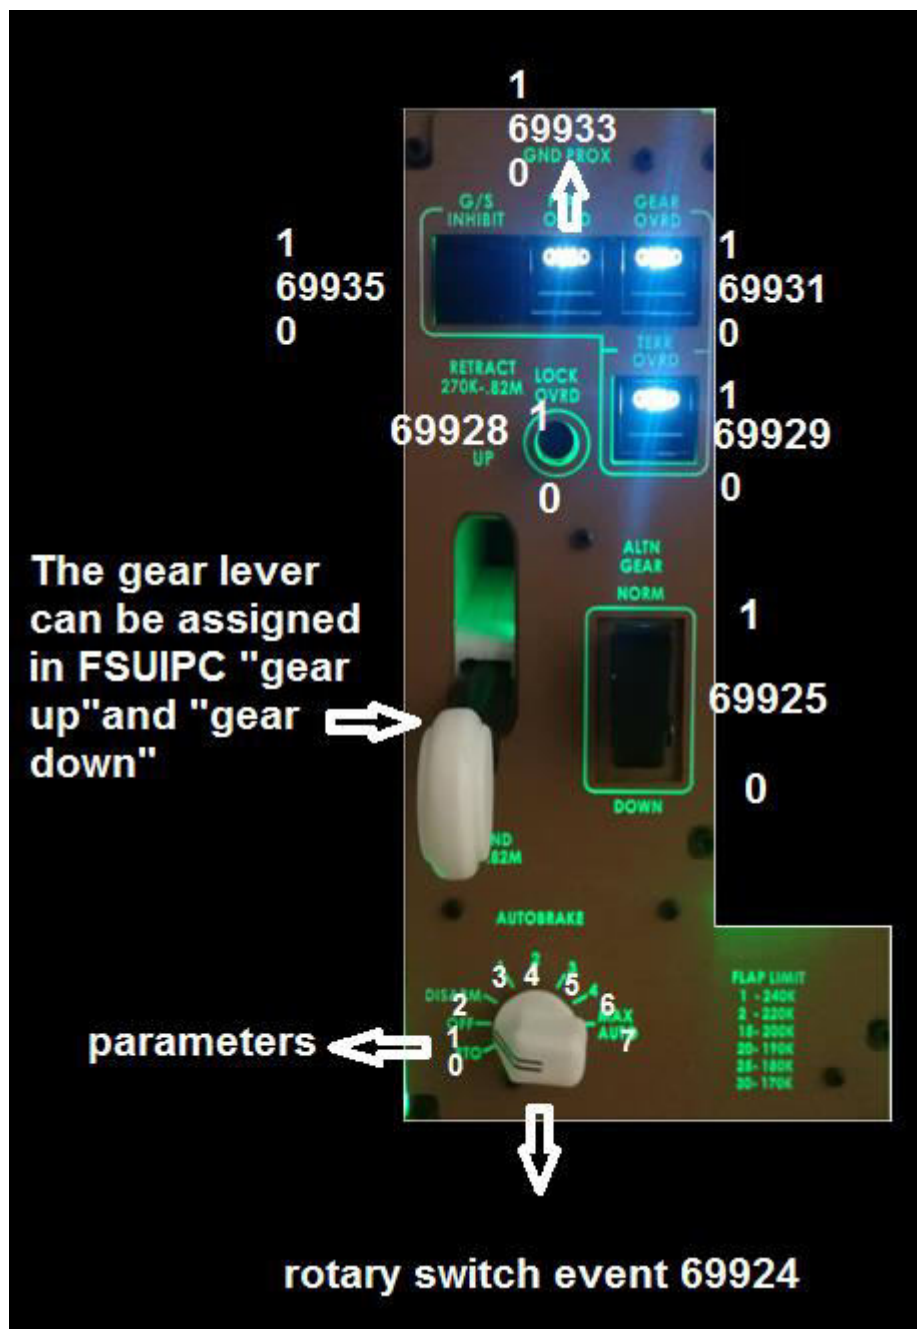

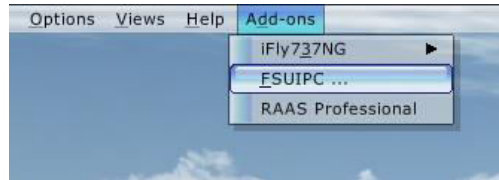

The 777 landing gear module was built around PMDG777 however it will work with other addons

In order to configure the module we recommend FSUIPC or Linda for FSX/P3D

FSUIPC configuration through PMDG 777 Event ID List

Follow our PMDG event ID tutorial in order to learn how to use the events with FSUIPC

Open FSX/P3D then load your PMDG addon then go to addons and select FSUIPC

LINDA for FSX/P3D

The Linda freeware software it's very easy to use however in order to use this module while flying,LINDA has to run in background
