

FLIGHT SIM PM

QUALITY FOR EVERY BUDGET 

787 Landing Gear Module

First step is to make sure the hardware functions are working
check the **FlightSimPM hardware** user manual

This module is compatible with FSX,P3D,X-plane

The 787 landing gear module was built to be used with 787 addons like Quality Wings however it will work with other addons

In order to configure the module we recommend FSUIPC along with Linda

LINDA for FSX/P3D

The Linda freeware software it's very easy to use however in order to use this module while flying,LINDA has to run in background

LINDA : <https://www.avsim.com/forums/topic/512119-new-linda-309-32-64-bit-compatible-28-sep-2018/>

PMDG 787 LINDA module : <https://www.avsim.com/forums/topic/538165-new-qw787-dreamliner-v08-beta-12-sep-18/>
